

## CAF 19/1000

Available in 0.4mm and 0.7mm steel the CAF 19/1000 Liner Panel combines strength and stability to provide the best possible solution to any lining requirement.

A bright white polyester coating on the exposed surface of the panel gives the product unique reflective properties that help improve interior lighting conditions and reduce the need for artificial illumination.

### PROFILES

*The 19/1000 profile without swages is only available in 0.7mm. Please note that when the liner panel is manufactured without swages rippling may occur and there may be slight marking on the cut edges.*

For structural purposes we recommend the 0.7mm Liner Panel. The maximum length for safe on site handling is normally 6000mm.

### APPLICATIONS

When manufactured without swages the 0.7mm liner is suitable for use with certain standing seam systems.

The 0.7mm Liner panel set at 1.8 spans has been tested in accordance with ARC(M)001:2000 Test for Fragility of Roofing Assemblies and achieved Class B. A copy of the Test Report dated 18th November 2006 is available.
